

Introducing the
**Advanced Institute for
Minimally Invasive Surgery**
Only at West Florida Healthcare

Where Technology Meets Compassion

West Florida Healthcare is proud to be the first hospital in Northwest Florida to introduce the DaVinci Xi minimally invasive robotic system which joins the Mazor X robotic system for minimally invasive spine surgery and our current DaVinci Si HD to form the Advanced Institute for Minimally Invasive Surgery (AIMIS).

Experience matters a great deal in complex robotic assisted procedures, especially those that treat cancer and other diagnoses within the urology, gynecology, spine and general surgery fields. The volume of surgeries performed by a hospital has been shown to have a major positive impact on patient outcomes. The experienced surgical team at AIMIS, with a seasoned operating room staff uniquely dedicated to robotics, are trained to deliver high-quality, safe and compassionate care.

Potential benefits of minimally invasive surgery include:

- Less Blood Loss
- Fewer Complications
- Less Need for Narcotic Pain Medicine
- Shorter Hospital Stay
- Faster Recovery
- Smaller Incisions with Minimal Scarring
